DETAILED ACTION

1. This action is responsive to the paper(s) filed 3/03/04.

2. As best understood, claims 36-41 are alternatively rejected under 35
U.S.C. 102(a) as being anticipated by Culliss. Column 17 teaches providing advertising with search results based on the search term. Regarding claim 40, the system is capable of providing a single search result.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 10-12, 14, 16-25, 27, 29-36, 39-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Culliss in view of Cohn et al (US6308202).

Regarding claims 10-12, 24, 25, Culliss teaches a user executing a search via a web-based search engine. A web page containing organized links are returned to the user. The HTML page of links is taken to provide programming script which contains variables that define each of the ordered links (such as URLs, link order, link titles) that are read. The user's search activities are recorded [abstract, 5:32-67]. Culliss teaches that the search activity history can be stored as cookies [29:22-30] and that the search

Application/Control Number: 09/629,013

Art Unit: 3622

activity histories can affect future search result scores and subsequently, the returned results and their order [17:1-34]. In this manner, cookies are provided before the user selects a link of a search hit. Culliss teaches that the links selected by the user are tracked and used to modify future search results. This inherently requires cookiestorage of the specific link information along with user search and selection history. Culliss teaches search results and activity to be tracked using cookies. Culliss teaches to score the search hits as well as the search selections [7:10-22]. Cohn et al teaches the idea of showing ads based upon the selected link URL. It would have been obvious to one of ordinary skill at the time of the invention to have included advertising with the system of Culliss based on the selected link(s) so as to generate revenue.

Regarding claim 23, providing the dynamic web page results (search results based on the latest scores) inherently includes reading of the links, the link information and link order (variables) as it renders a dynamic HTML page of search results for the user. The use of cookies by the ad provider inherently includes at least temporary storage of the cookies in a database/datastore.

Regarding claim 16, 29, the list of search hits/links is taken to be a tree.

Regarding claims 17, 30, 36, 39-41, the ordered list of matches to the user-submitted search terms provides level numbers of the tree; ads targeted to ordered URLs are taken to be targeted to the ordered positioning within the list. The links can be considered to be all at the same level or each at different levels. Applicant's claim language is quite broad - the level(s) can be defined in a variety of ways. Further, Culliss teaches that the system scoring is based upon the relative positioning of the

Art Unit: 3622

links within the list/tree [16:54-67]. Regarding claims 40, 41, any of the positions represent URLs which can be used as a basis for targeted ads.

Regarding claim 18-22, 31-35, any of the links appearing within the tree/list of results can be taken to be "internal" to the list/tree, as members of the tree/list.

Alternatively, the links on the list/tree can be taken as "leaves" on the tree – no structural definition is provided by the claim. The list can simply be taken to be leaves in a list. As best understood, claims 21 and 22 are met by Culliss providing a first link having links below it as well as a second link having links below it as inherent in the search results list/tree.

Regarding claim 14, 27, it would have been obvious to one of ordinary skill at the time of the invention to have satisfied the advertising requests by reading the cookies to determine URLs.

5. Claims 13, 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Culliss in view of Cohn et al and Merriman et al (USUS5948061). Merriman et al teaches customized advertising whereby ad impressions are tracked so that the ad can be shown the appropriate number of times during the ad campaign. It would have been obvious to one of ordinary skill at the time of the invention to have included such ad impression tracking with that of Culliss and Cohn et al. Merriman et al's tracking and updating of the history of the targeted ad displays is taken to update a data structure associated with the ad, based on the variable.

Application/Control Number: 09/629,013

Art Unit: 3622

6. Claim 37 is rejected under 35 U.S.C. 103(a) as being unpatentable over Culliss in view of Cohn et al and Davis et al (US6269361). Davis et al teaches the idea of advertisers paying to affect the placement/order of search results. It would have been obvious to one of ordinary skill at the time of the invention to have included such a component with the scoring and ordering of Culliss' search results, so as to generate additional revenue for the site. Advertisers pay more for higher listings as taught by Davis et al.

Response to Arguments

7. Applicant's arguments filed 3/3/04 have been fully considered but they are not persuasive. Applicant argues that the cookies are processed before any links are selected by the user. As stated above, the historical component of Culliss' tracking provides cookie processing before subsequent links are selected.

Applicant argues that Culliss does not teach the ad server to provide cookies in a database. However, handling of cookies necessarily requires at least temporary storage of cookie data in a datastore/database by the server.

Applicant argues that the examiner's definition of internal and leaf are inconsistent with convention/specification. It is noted that the listing of Culliss's links can be described in many different manners in terms of hierarchy, leaf/internal node, ancestry, etc as needed. All the links can be considered to be at the same "level," or at different nested "levels", for example. Culliss need not indicate any particular hierarchy.

Page 6

Applicant argues that Cohn et al requires advertising independent of the user. However, the teachings of Culliss are modified by Cohn et al. Culliss provides userspecific tracking via cookies.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey D. Carlson whose telephone number is 703-308-3402. The examiner can normally be reached on Mon-Fri 8:30-6p, (off on alternate Fridays).

Application/Control Number: 09/629,013

Art Unit: 3622

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eric Stamber can be reached on 703-305-8469. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
